

GLASS & STUFF.....

BROUGHT TO YOU BY DESIGN TINTS

HERE'S HOW WINDOW FILMS ARE THE SMART ANSWER TO BETTER BUSINESS.

You probably know that today's buildings utilise more glass than ever before. The trend toward open floor plans, high ceilings and extensive use of glass has become the preferred standard. But glass windows are notorious energy wasters, making building owners and managers increasingly concerned about excessive glare, heat build-up and higher energy costs.

Quality window films provides comfort, reduced glare and energy savings. We recommend a retrofit product installed directly to the interior side of the glass. It helps correct temperature imbalances between sunny and shady areas and it deflects harsh, uncomfortable glare reducing eye strain that is common while doing paperwork or viewing computer screens!

DESIGN & DECORATIVE FILM

Today's Decorative and Corporate Image window films are an exciting and flexible art medium used by Architects, Interior Designers and Corporate branding to achieve individually tailored visual effects. DeSign Tints are in an era of rapid technological change. Using our own creative team and digital photography we can create design features to exterior or interiors glass that are breathtaking.

We can add a fresh riveting design feature to glass or provide Corporate branding in innovative and visually challenging ways. Together with Energy Management, Safety, Security and Anti-Graffiti Window Films are now a highly desirable multifunctional building design tool.
