INNOVATORS OF DESIGNER FILMS, SIGNS & TINTS

A WORLD OF WINDOW FILMS

www.designtints.co.nz

About Us

Design Tints has over 30 years experience in window films, frosted design & printed films and signage and has become a respected market leader with professional service, high quality production and superior installation to corporate, institutional and leading construction and interior fit out companies in New Zealand.

We are proud to offer our customers this guarantee; Design Tints will provide the widest range of film solutions, supplied and installed to the highest degree of quality for a price commensurate with that quality of service.

As a specialist window film supplier our range includes; Solar films for thermal performance and glare reduction, security and safety film for 'duty of care' and film for office fit outs from simple frost to our exciting range of digital print solutions for creative film applications.

At Design Tints we not only embrace the digital print world, we push the boundaries in new directions. Everyday we are set new challenges by imaginative designers, artists and marketers to which we respond with technical expertise and qualified advice.

Over 30 years ago we applied our first window film, now we work with New Zealand's leading architects and builders, solving their glazing, solar and safety issues. We work with leading corporate brands bringing their visual identity to life.

The examples shown in this brochure are intended as a guide for you to see what is possible. In fact, just about anything is possible. Our experienced team is ready to assist you with service, advice and a fair price.

We welcome your enquiry and look forward to working with you on your next project.

Decorative Films

Bringing Glass to Life. Glass is one of the most versatile materials available to the commercial building industry today. As a cladding, glass is water proof, light and easy to install. As office partitioning, glass provides cost effective semi-permanent walling. Glass is also the perfect substrate for decorative films. From simple frosted panels of glass providing privacy to business, there is a film solution for all panes of glass.

In modern architecture, glass has become a blank canvas for designers to create stunning walls of colour and texture whilst allowing filtered light to interiors.

Design Tints provides a full 'in house' computer design and cutting service to insure your next pane of glass will be anything but ordinary.

Printed Films

Bringing Art to Glass. Windows have evolved. Glass is the new medium for artists and designers to realise their imaginative vision. What was once dreamt is now possible. The reality of digital printing has enabled those dreams to become possible, affordable and remarkable.

Design Tints has not only embraced the digital print world, we have pushed the boundaries in new directions. Everyday we are set new challenges by imaginative designers, artists and marketers, to which we respond with professional service, high quality production and superior installation.

Solar Films

Bringing Comfort to Buildings. Since the first buildings were designed, architects have struggled with the need for natural light in building interiors and the need to provide thermal comfort to the people who live and work inside. Air conditioning provides a mechanical solution but it comes at a cost. Energy is getting more expensive and the systems needed to heat and cool commercial spaces place a demand on consumption and contribute to green house gas emissions.

Solar window film provides a clear solution to lowering energy consumption. With solar energy reductions of up to 81% air conditioning can operate more efficiently, improving costs and the environment.

Clever building managers have upgraded their windows to include solar film, passing the energy saving on to tenants who benefit from comfortable indoor environments, a reduction in glare on computer screens and improved employee satisfaction.

Safety & Security Films

Bringing Safety to Glass. 'Duty of care' is a statement that is used more than ever in modern society. From simple awareness of possible danger to complex threat assessment, building managers must consider the safety of people in and around the built environment.

Glass is often considered the weakest point in a building. Windows that break in extreme climatic conditions or a result of terrorist action can cause major damage and serious injury. Flying sharp shards of glass can be avoided by installing clear window film designed to maintain the pane in one piece following impact.

Design Tints provides a range of films to deal with the specific nature of any threat. From film designed to bring old glass up to current AS/NZS 2208, to bomb blast film for high threat public spaces, there is an advanced solution to solve your risk assessment.

Safety, Security And Anti-graffiti Films Protect Against Injury
And Provide Peace Of Mind.

Safety & Security Films

Bringing Clarity to Graffiti. Graffiti and vandalism are unfortunately growing issues in the community. For facility managers managers, this problem causes visual damage to buildings and structures and usually demands costly removal.

An innovative approach to the problem sees clear anti-graffiti film installed onto glass, stainless steel, marble or perspex to protect the substrate from damage by absorbing the graffiti into the film. Removal and replacement of film makes economic sense and ensures quick response to the visual aspect of the problem.

Design Tints can provide a cost effective anti-graffiti and vandal protection program for your building or structure before this malicious problem damages more than your bank account.

Signage

Bringing Communication to Life. Communication is important to every organisation. Despite the promotion of the paperless business, printed communication is now more important than ever. Signage needs to stand out and make a statement just to cut through the clutter of a commercialised society. From simple direction messages to corporate branding, signage must 'say' a lot.

Design Tints has a growing reputation in the signage industry with creative solutions to basic and complex communication requirements.

When you have something to say, let us help you say it.
